ISSUES LIST

Name	Description	Type	Severity	Number
String literals should not be duplicated	Duplicated string literals make the process of refactoring error-prone, since you must be sure to update all occurrences. On the other hand, constants can be referenced from many places, but only need to be updated in a single place. Noncompliant Code Example With the default threshold of 3: def run(): prepare("this is a duplicate") # Noncompliant - "this is a duplicate" is duplicated 3 times execute("this is a duplicate") release("this is a duplicate") Compliant Solution ACTION_1 = "action1" def run(): prepare(ACTION_1) execute(ACTION_1) release(ACTION_1) Exceptions No issue will be raised on: duplicated string in decorators strings with less than 5 characters strings with only letters, numbers and underscores @app.route("/api/users/", methods=['GET', 'POST', 'PUT']) def users(): pass @app.route("/api/projects/", methods=['GET', 'POST', 'PUT']) # Compliant def projects(): pass	CODE_SMELL	CRITICAL	1
Cognitive Complexity of functions should not be too high	Cognitive Complexity is a measure of how hard the control flow of a function is to understand. Functions with high Cognitive Complexity will be difficult to maintain. See Cognitive Complexity	CODE_SMELL	CRITICAL	3
Function names should comply with a naming convention	Shared coding conventions allow teams to collaborate efficiently. This rule checks that all function names match a provided regular expression. Noncompliant Code Example With the default provided regular expression: ^[a-z_][a-z0-9_]*$ def MyFunction(a,b): ... Compliant Solution def my_function(a,b): ...	CODE_SMELL	MAJOR	2
Local variable and function	Shared naming conventions allow teams to collaborate effectively. This rule raises an issue when a local variable or	CODE_SMELL	MINOR	7

parameter names should comply with a naming convention	function parameter name does not match the provided regular expression. Exceptions Loop counters are ignored by this rule. for i in range(limit): # Compliant print(i)
